Appln. No. 09/575,429 Filed: May 22, 2000

Page 2 of 16

## Amendments to the Claims:

1. (currently amended) A specimen cup for testing fluid specimen, when fluid specimen is contained therein, said cup comprising:

a container used to collect the fluid specimen, said container having a top opening and a recessed flat front wall;

a cassette <u>having a substantially flat front surface</u> slidably received within a receptacle integrated with said container and located near said flat front wall, said cassette containing at least one test strip, configured to provide an indication of a characteristic of the specimen regarding a drug of abuse, when said at least one test strip is exposed to the drug of abuse, and having a window <u>in said flat front surface</u> aligned with said strip, said receptable receptacle only receiving said cassette with said window facing said flat front wall <u>of said container</u>; and

a lid configured to cover said top opening with the cassette inside, wherein said receptacle extends vertically below said lid.

2. (previously presented) A specimen cup for testing fluid specimen contained therein, said cup comprising a container used to collect a fluid specimen, a container lid, a cassette sealed and received in a receptacle integrated with said container, said cassette further containing chemical strips means to provide an indication of a characteristic of said specimen regarding drugs of abuse, wherein a bottom floor of said container slopes downwardly at 1-3° towards the bottom of said cassette allowing said specimen to be channeled towards said cassette.

3. (currently amended) A specimen cup for testing fluid specimen contained

therein, said cup comprising a container used to collect a fluid specimen which container has a

recessed flat front face, a container lid, a sealed cassette which is received within a receptacle

integrated with said container, said cassette having a substantially flat front surface and

containing chemical strips means to provide an indication of a characteristic of said specimen

regarding drugs of abuse, wherein said receptacle locates said cassette with said flat front

surface near the recessed flat front face so that a viewing area is provided close to said cassette

front surface.

4. (currently amended) A specimen cup as in Claim 3, wherein said cassette has a

window in said front flat surface in association with said chemical strips and is slidably inserted

into said receptacle, which receptacle has different opposite channels that mate with only one

of said cassette's outside edges and orient said cassette for proper testing and viewing with said

window facing said flat front wall face of said container.

5. (currently amended) A specimen cup as in Claim 3, wherein the at least-one

test-strip comprises said chemical strips comprise test strips used to test for THC, COC, MAP,

PCP and MOR.

6. (currently amended) A specimen cup as in Claim 3, wherein said cassette

comprises a plurality of isolated test channels which each house one of said at least one test

strip chemical strips for testing for the one drug of abuse.

Ø 006

Appln. No. 09/575,429 Filed: May 22, 2000

Page 4 of 16

7. (currently amended) A specimen cup as in Claim 6, wherein each of said

isolated test channels has a clear, sealed window associated therewith in said flat front surface

for viewing the results of a test.

8. (currently amended) A specimen cup as in Claim 7, wherein said clear, sealed

window is formed by a transport fluid-resistant sheet laying on top of said at least one test strip

to prevent fluid specimen from accidentally spilling and contaminating said at least one strip.

9 - 10. (canceled)

11. (previously presented) A specimen cup as in Claim 3, wherein said cup is

constructed of a material selected from the group consisting of thermoplastics, specialty

plastics, thermosets, and engineering plastics.

12. (previously presented) A specimen cup as in Claim 11, wherein said

thermoplastics is selected from the group consisting of polyamideimide (PAI), polyethersulfone

(PES), polyarylsulfone (PAS), polyetherimide (PEI), polyarylate (PAR), polysulfone (PSO),

polyamide (PA), polycarbonate (PC), styrene-malcic anhydride (SMA), chlorinated PVC

(CPVC), poly(methylmethyacrylate) (PMMA), styrene-acrylonitrile (SAN), polystyrene (PS),

acrylonitrile-butadiene-styrene (ABS), poly(ethyleneterephthalate) (PET), poly(vinylchloride)

(PVC), polyetherketone (PEK), polyetheretherketone (PEEK), polytetrafluoroethylene (PTFE),

poly(phenylene sulfide) (PPS), liquid crystal polymer (CCP), nylon-6,6, nylon-6,12

nylon-11, nylon 12, acetal resin, low and high density polypropylene (PP), high density

polyethylene (HDPE), low density polyethylene (LDPE), polystyrene, ethylene-vinyl acetate,

poly-vinyl-acetate and polyacrylic.

13 - 15. (canceled)

16. (currently amended) A specimen cup for testing a fluid specimen contained

therein, said cup comprising a container used to collect a fluid specimen, a container lid, a

cassette having a sealed window and in a substantially flat front surface thereof, which cassette

is removably receivable in a receptacle in said container, said cassette containing chemical

strips to provide an indication of a characteristic of said specimen regarding drugs of abuse, and

a dam structure attached to said cassette and located so as to form a recessed pooling area in

said cassette when said fluid specimen flows into said cassette's open bottom and portion to

form said pooling area, said pooling area being configured to expose said cassette's interior test

strips to the fluid specimen, while recessing the exposed portion of said test strips sufficiently

within said cassette to minimize potential contamination of the test strips.

17. (previously presented) A specimen cup as in Claim 16, wherein a bottom floor

of said container slopes downwardly at 1-3° towards the bottom of said receptacle, said floor

being configured to allow said specimen to be channeled towards said cassette.

18. (currently amended) A specimen cup as in Claim 16, wherein said container

has a recessed flat face which is located near said receptacle to move provide a viewing area

closer to said window in said flat front surface of said cassette.

19. (previously presented) A specimen cup as in Claim 3, further comprising a

hinged flap adjacent to a rim of said container, the hinged portion of the flap being affixed to an

interior surface of said container in a position which partially blocks the opening of said

container, said flap being configured to reduce the splashing of said fluid specimen during

collection, testing, transport and storage.

20. (previously presented) A specimen cup as in Claim 3, further comprising a

floating member configured to substantially fill a volume directly above said fluid specimen

once said fluid specimen is entered into said cup, said floating member being configured to

reduce the splashing of said fluid specimen during collection, testing, transport and storage.

21. (currently amended) A specimen cup as in Claim 3, further comprising a dam

structure attached to said cassette and located so as to form a recessed pooling area in said

cassette when said fluid specimen flows into said cassette's open bottom end portion to form

said pooling area, said pooling area being configured to expose said at-least one-test strip

chemical strips to the fluid specimen, while recessing the exposed portion of said at least one

test strip chemical strips sufficiently within said cassette to minimize potential contamination of

said at least one-test strip chemical strips.

22. (previously presented) A specimen cup as in Claim 3, wherein said lid is

constructed to mate with a rim of said container and provide a substantially sealed closure.

Appln. No. 09/575,429 Filed: May 22, 2000

Page 7 of 16

23. (previously presented) A specimen cup as in Claim 22, wherein said lid is

independent of said container.

24. (currently amended) A specimen cup for testing a fluid specimen contained

therein, which cup comprises:

a container used to collect a fluid specimen, which container has a top opening,

a recessed flat front wall, and a receptacle integrated with said container and located

near said flat front wall,

a cassette proportioned for insertion into said receptacle, which cassette contains

at least one test strip that is created to provide an indication of the presence of a

chemical component, for which said specimen is being tested, when said test strip is

exposed to the component,

said cassette having a window in a substantially flat front surface which window

is aligned with said test strip and said receptacle being constructed to only receive said

cassette with said window facing said flat front wall; and

a lid configured to close said top opening with said cassette disposed within said

receptacle inside the container.

25. (previously presented) The specimen cup of claim 24 wherein said window is

sealed against liquid entry.

26. (previously presented) The specimen cup of claim 24 wherein said receptacle

slidably receives said cassette and said cassette has different channels formed along its opposite

Appln. No. 09/575,429 Filed: May 22, 2000

Page 8 of 16

side edges which mate with said receptacle in only one orientation so that said window faces said flat front wall.
